Paper organisms

Each organism does one job on a screen: a question with its answers, a search box with its filters, a card, a summary. Every one is the full width of the screen and a whole number of rows tall, so any of them fits under any other.

1. **Print at 100%** (“actual size”) on A4. The line at the bottom of each page should measure 5 cm.
2. **Cut along the dashed line.** Every piece is 9 cm wide; its height is 1 to 6 rows.
3. **Stick them onto a screen canvas**, top to bottom. A screen is full at 14 rows: fewer is fine, more will not fit.
4. **Write your own words** over the grey: the heading, the labels, the button.
5. Need two of something? Print that page twice.

Every piece is labelled in small grey type with its **code**, its **name** and its **size in pixels**, for example **ANS-02** One answer from a few · 375 × 224 px. The next page lists them all. The codes are the same in the screen tool, so a paper screen can be rebuilt there piece by piece, in the same order.
